

MOHAMED MOHAMED FAWZY MOSTAFA

Networking & Cybersecurity Student

+201090401197 | mmfmas46@gmail.com | linkedin.com/in/mohamed-fawzy200

PROFILE

Third-year Computer Science and Artificial Intelligence student specializing in Information Technology and Networking. Hands-on experience with network design, configuration, and security through Cisco Packet Tracer and EVE-NG simulations, with focused training in CCNA, Microsoft server administration, and Fortinet network security. Seeking a part-time role to apply practical networking and cybersecurity skills in a real-world environment.

CORE COMPETENCIES

Networking | Routing & Switching | VLAN Configuration | OSPF | Network Security | Access Control Lists (ACL) | Port Security | Firewall Configuration (Fortinet/FortiGate) | Network Design & Troubleshooting | Windows Server Administration | Virtualization (VMware) | Cisco Packet Tracer | EVE-NG

EDUCATION

Bachelor of Science in Computer Science and Artificial Intelligence 2023 – Present
Faculty of Computers and Artificial Intelligence | Specialization: Information Technology & Networking

- Current Standing: 3rd Year

CERTIFICATIONS & TRAINING

CCNA (Cisco Certified Network Associate)	NTI
Fortinet Cybersecurity Certification	NTI
IT Technical Support	TIEC
MCSA (Microsoft Certified Solutions Associate)	Self-paced (YouTube)

TECHNICAL SKILLS

- Networking: CCNA concepts, routing & switching, VLANs, network design
- Security: Fortinet (FortiGate firewalls), network security fundamentals
- Systems Administration: MCSA, Windows Server
- Tools & Simulators: Cisco Packet Tracer, EVE-NG, VMware
- Other: Firewall configuration, virtualization, technical support

ACADEMIC PROJECTS

- Segmented Enterprise Network with VLAN-Based Access Control** Individual Project | Cisco Packet Tracer
- Designed and implemented a hierarchical network (Core, Distribution, and Access layers) using 3 routers and a multilayer switch.
 - Configured 4 departmental VLANs (IT, HR, Sales, Engineering) plus an isolated Guest network, each with its own subnet.
 - Deployed DHCP and Web servers, and applied static/inter-VLAN routing to connect all segments.
 - Implemented Access Control Lists (ACLs) to selectively restrict and permit traffic between VLANs (e.g., allowing ICMP/ping while blocking HTTP access, and vice versa) for network segmentation and security.
- Redundant Network with OSPF Routing and Port Security** Individual Project | Cisco Packet Tracer

- Built a multi-switch, multi-router topology connecting PCs and laptops across multiple LAN segments.
- Configured OSPF as the dynamic routing protocol to enable automatic route discovery between routers.
- Designed an active/standby link redundancy setup so that if a primary port or link failed, traffic automatically rerouted through a backup path, ensuring network availability.
- Applied Port Security on access switches to restrict unauthorized device connections and prevent MAC address spoofing.

ADDITIONAL TRAINING

- Digital Marketing — TIEC, Creativa Hub Qena
- Freelancing Fundamentals — TIEC, Creativa Hub Qena

LANGUAGES

- Arabic — Native
- English — Very Good
- French — Amateur
